Department / Program:

ECONOMICS (pHD)

Type of Course Unit:

Elective

Objectives of the Course:

The aim of this course is to try to understand and define the reconstructed economy based on "information".

Teaching Methods and Techniques:

Criticisms directed at "traditional economics" will be addressed. The foundations of contemporary economic science are based on the classical theory of economics in the 18th century. The classical theory has chosen the way of telling economics with certain assumptions. Basic assumptions such as invisible hand, rationality, perfect competition and equilibrium are accepted without any discussion. Economics, which is a social science, is being tried to be explained with mathematics. This derst criticism of traditional economics will focus on post-autistic economics and radical political economics, especially Marxist economics.
